Customer Spotlight on End User Computing

Inspired by leading organizations that enabled friction-free end user computing and left limited scalability behind with Citrix on Nutanix.

The future of work has never been more exciting, yet also unpredictable. Whether you are in an industry such as healthcare or hospitality ... energy or education -- it's likely that supporting a secure remote workforce will become of utmost importance to your organization.

With Citrix on Nutanix, your organization will be ready for anything. Provide end users seamless access to apps, virtual desktops, and protected data from any cloud on any device, in any location, at any scale – all with the simplicity, security, and speed of Nutanix + Citrix.

Here's how 6 organizations enabled friction-free end user computing and left limited scalability behind with Citrix on Nutanix.

“ We are providing all of our virtual apps and virtual desktop services based on Citrix technology, predominantly. Of course, one of the main advantages was that there is a deep integration of the Citrix tools into the Nutanix portfolio. We are using machine creation services to deploy images and manage the images across our on-prem environment, as well as public cloud resource layers. We are using the file servers, which is also a benefit of the Nutanix solution, compared to other competitors in that space. ”

Michael Janssen, Lead Architect for remote access at Vodafone (United Kingdom)

“ Seattle Children’s Hospital launched an initiative to ensure that everybody in the children’s hospital system who needed access to the IT network would have it. They chose a Nutanix virtual desktop infrastructure (VDI) solution, which hosts a Citrix presentation layer that streams an operating system and applications from the cloud to users’ personal computers. “We wanted to build a platform where our end users could consume their virtual desktops anywhere, anytime,” Dr. Chaudry recalled. “The model was simplify, standardize and consolidate.” The system had to be able to scale quickly, running hardware storage in a single plane. The goal: supply VDI to 13,000 users, divided by work shifts. ”

Zafar Chaudry, SVP & CIO, Seattle Children’s Hospital (United States)

“ Our key clinical applications are really really critical to patient care. It has to work. If a doctor or a nurse cannot access that application, they can’t treat the patient and so patients’ lives depend on this environment being functional and working. With Nutanix and Citrix combo, we’ve been able to achieve that level of resilience in our service to the public. ”

Wylie Edwards, Technical Operations Manager, Gippsland Health Alliance (Australia)

“

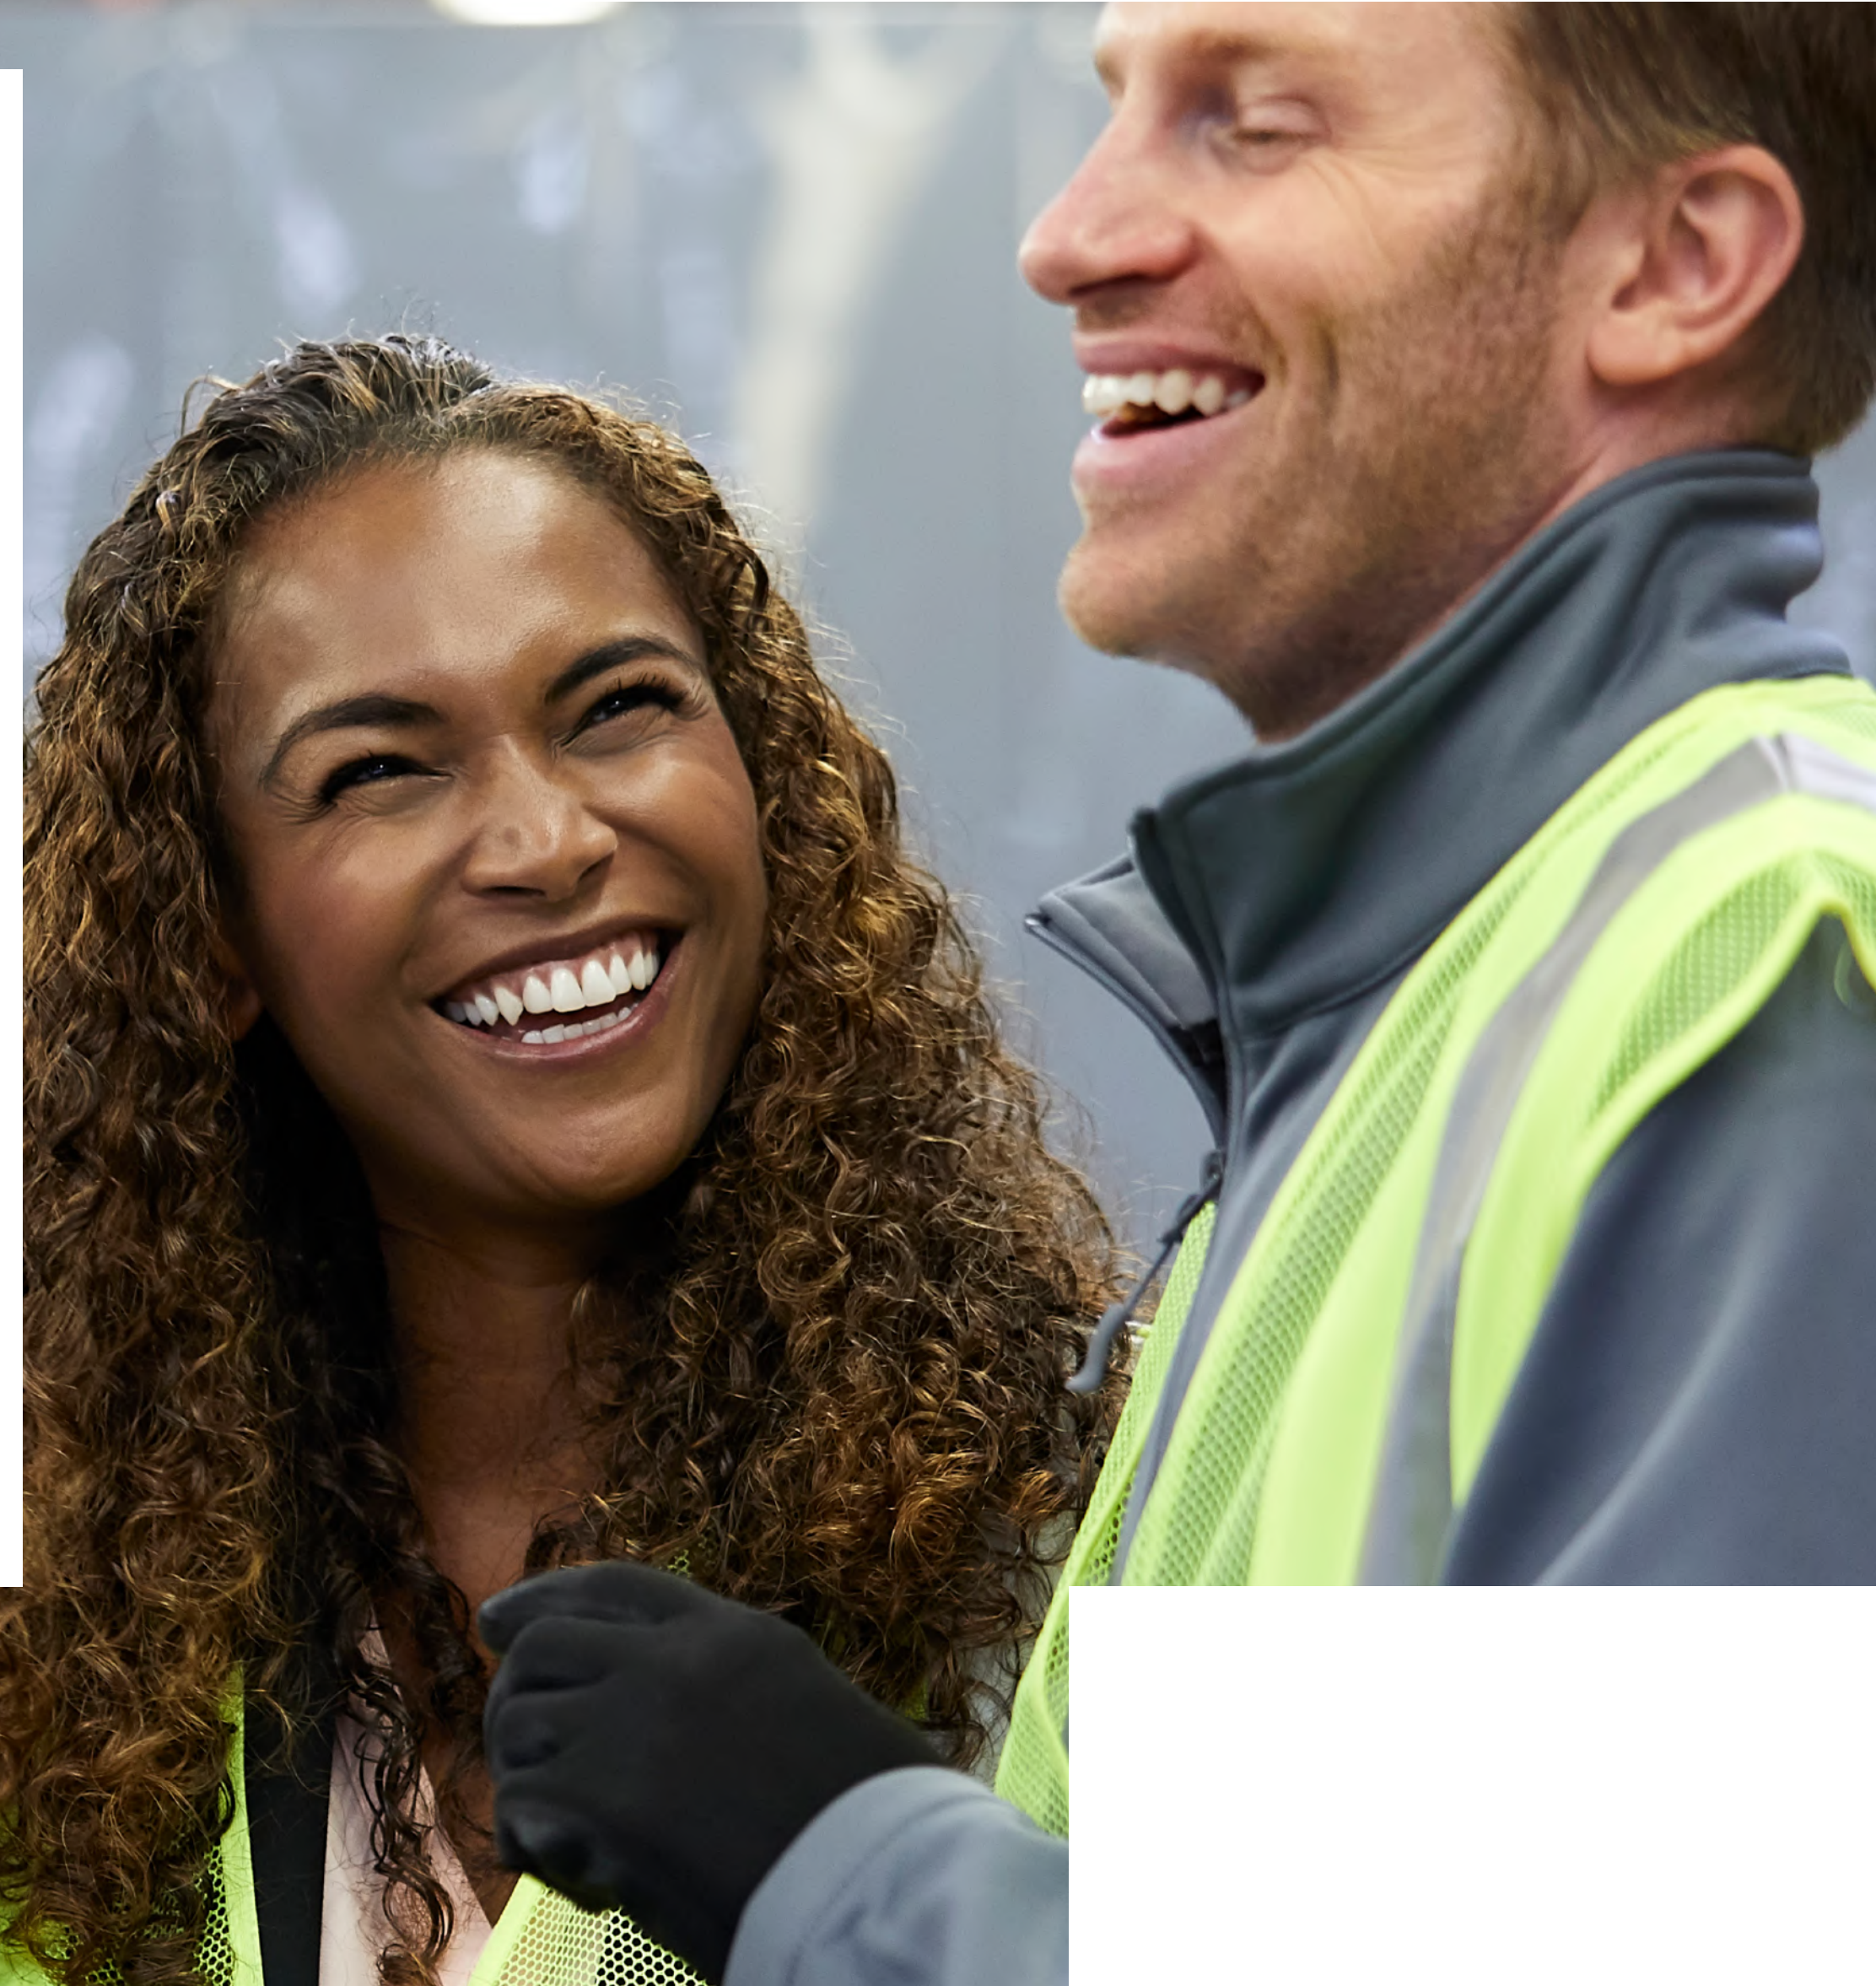

Citrix and Nutanix, I could probably say, it's a match made in heaven. The technology works so great together and is so integrated these days that it makes our life so much easier and it's a big part of our infrastructure of our services we provide to the students and facility staff members. We use Citrix as a main pillar for remote working as well as to give our students the chance to work with their own devices, so it has become an important pillar of our BYOD strategy as well. ”

Rene Bigler, Head of Information Technology at IDM (Switzerland)

“ Citrix VDI drives the majority of our business in terms of office bound workers, and it’s all empowered by Nutanix. We’ve seen a significant increase in performance from deploying Citrix for our traditional office and productivity applications. The environment also runs our clinical documentation systems that take care of our residential aged care environment, and resident management tools for our retirement villages and residential life care services. Nutanix also supports more than 120 mobile healthcare providers working in the field. ”

Regan Stathers, Executive General Manager, Technology and Property, Whiddon (Australia)

“

We are using Nutanix for the server/backend virtualization and Citrix for the End User Computing experience. The benefit of that combination is tremendous, because it helps us really be diligent with security and application delivery resting on the back of HIPAA and the HITECH ACT.

”

Isaiah Nathaniel, Chief Information Officer
